**Request a FREE sample!\*\***

Available sizes: .012 – .21x.025  
(Not all alloys available in all sizes.)

*Tooth-colored archwires are ink midline-marked (black upper, red lower) for symmetrical identification. After placement, rub midline mark gently with a cotton swab dipped in isopropyl alcohol – this will remove the majority of the ink.*

Manufactured in both G4™ and S304 stainless steel, tooth-colored wires are epoxy coated making them extremely durable and stain resistant.

*Tooth-colored archwires necessitate the use of base wires that are .002" smaller than the final coated dimensions, so please consider this when selecting wires to ensure performance will be compatible with treatment objectives.*

## SMARTBOND® ADHESIVE

SmartBond® is a true one-step adhesive that bonds in a wet field. In fact, SmartBond® adhesive is activated only when it contacts moisture. Teeth are cleaned and etched for bonding as usual, but when the etchant is rinsed off, the next step is to bond. There is no drying, no sealants and there is no dry field to maintain. SmartBond® activation begins when a bondable attachment is delivered to the tooth and the adhesive contacts wet enamel. Five-second working time, five-minute bond set.
